DETAILED OFFICE ACTION

Election/Restrictions

Claims 1- 26 are pending in this application.

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1-9,21 drawn to a magnetic memory cell , classified in class 257, subclass 295.

Group II. Claims 22-26 drawn to process of making the magnetic memory cell semiconductor device, classified in class 438, and subclass 003.

Group III. Claims 10-20 drawn to a cross point magnetic memory arrays classified in class 365, and subclass 230.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of following can be shown: (1) that the process as claimed can be use to make other and materially different product or by hand, or (2) that process as claimed can be made by another and materially different process. (MPEP § 806.05(f)). In the instance case unpatentabilities of the group I invention would not necessarily imply unpatentability of the group II invention, since the device of the group I invention could be made by the processes materially different from those of the group II invention, for example, in the claim 22 a method for making the memory cell of claim 1 , wherein this method can be used to make a magnetic metal detection sensor which is a materially different from claim 1 a magnetic memory cells.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because **the cross point resistive memory device can be used for phase change chalcogenide memory cells . The subcombination has separate utility such as: the claimed magnetic storage element can be used in hybrid magnetic and non-magnetic memory arrays.**

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not co-extensive. Therefore, separate examination would be required and restriction for examination purposes as indicated is proper.

5. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h).
